

Project – STARTUP ANALYSIS

1. Startup Name

The Startup selected for this Analysis is **Lenskart**.

Lenskart started in 2010 as a portal and now works as a multi-channel retailer that also has physical stores. Lenskart is a name in the eyewear retail sector.

2. Founder(s)

Lenskart was founded by Peyush Bansal, Amit Chaudhary and Sumeet Kapahi. Peyush Bansal serves as co-founder and chief executive officer. Peyush Bansal and his partners noticed how vital eyewear retail is in India. They also saw that technology could simplify and improve the buying experience.

3. Business Concept

Lenskart's core idea is to blend technology and retail in the eyewear market. Customers can browse items online try them in store and get eye tests before purchasing. Lenskart also leverages technology in production, inventory control and vision testing. The company prioritises a mix of online and offline shopping since many buyers prefer to shop for glasses online.

4. Customer Targeting

Lenskart primarily serves people who need prescription glasses, sunglasses and contact lenses. The main groups include students, office workers and families that purchase higher-end eyewear. By opening stores Lenskart reaches customers online and in brick-and-mortar shops making it a two-channel business. Lenskart's items are designed for buyers who value convenience and quality.

5. Revenue Model

Lenskart makes money by selling eyewear on its website and in its stores. The main items are prescription glasses, sunglasses and contact lenses offered across a spectrum from budget to premium. In FY26 Lenskart's total revenue was INR 8,814 crore a 32 % increase from INR 6,652 crore in FY25. Profit after tax climbed from INR 297 crore in FY25 to INR 501 crore in FY26 indicating that Lenskart is expanding both sales and earnings.

6. Amount Raised

Fundraising has enabled Lenskart's expansion. Investors such as SoftBank and others provided capital that Lenskart used to grow its technology, open stores and boost manufacturing. Lenskart's IPO and listing on the stock exchange in November 2025 was another milestone. It is clear that Lenskart has shifted from venture capital to market-based fundraising allowing investors to assess Lenskart on performance than just potential growth.

7. Main Competitors

Lenskart's main competitors are Titan Eye+, Specsmaakers and other optical shops. Competition is tough because each rival offers a range of products, competitive prices, premium brands, many store locations and good customer service. Lenskart's biggest advantage is its network that lets customers shop online and in stores. However Lenskart faces a challenge: expansion costs. As Lenskart opens stores quickly it must ensure each store is profitable. Simply adding stores without checking profitability is risky. Lenskart also faces pressure from customers. Must keep showing growth to its shareholders.

8. Two Challenges

The first major challenge is **the cost of expansion**.

Opening new stores, investing in technology and entering international markets require large amounts of capital. So, simply increasing the number of stores is not enough; the company has to make sure those stores generate enough sales and profit.

The second challenge is **competition and valuation expectations**.

Eyewear has become a more organised and competitive market, and customers can easily compare prices. Since Lenskart is now a listed company, investors will also expect the company to maintain strong revenue and profit growth. This puts more pressure on the management to deliver consistent financial performance.

9. Future Growth

Lenskart has future growth prospects because of its position in India's organised retail sector. Currently most of Lenskart's sales come from Tier 1. Tier 2 cities. In the future Lenskart can expand into Tier 3. Tier 4 areas. The Indian eyewear market is highly profitable. Can support many businesses. Lenskart could also sell abroad to increase revenue. Technology will help Lenskart serve customers better.

In FY26 Lenskart's profit was INR 1,749 crore giving an EBITDA margin of 19.8 %. These figures show that Lenskart is growing not in revenue but also in profit.

That is important because Lenskart's future success will depend on its profit margin.

10. My View – Whether it has been a success. Not.

I believe Lenskart is a success as a startup because of its growth.

Lenskart began with the goal of making eyewear to buy and affordable.

Since then Lenskart has become a business that sells eyewear runs a store uses technology and manufactures its own products.

Lenskart's success is evident in its results, with increasing revenue and profit.
